CLIENT ONBOARDING STRATEGY

AI Chatbot Intake + Phone Line

A discreet, conversational intake journey for high-net-worth clients that combines a branded AI liaison with a visible direct phone line and a consultant-ready CRM workflow.

STRATEGIC RATIONALE

Why a Chatbot Beats a Form

HNWIs are used to conversations, not forms. A calm greeting that acknowledges confidentiality immediately feels more aligned with a premium security firm than a rigid multi-step form.

Aspect	Multi-Step Form	AI Chatbot
Feel	Transactional, bureaucratic	Conversational, personal
Flexibility	Fixed questions in a fixed order	Dynamic, following the client's lead

Aspect	Multi-Step Form	AI Chatbot
Abandonment	Higher, especially after the first step	Lower, with each message as a micro-commitment
Depth of insight	Structured but limited	Open-ended, so clients reveal more naturally
Brand alignment	Risks feeling like generic SaaS	Feels closer to speaking with a discreet receptionist

CONVERSATION DESIGN

The AI Chatbot as Virtual Liaison

1 Greeting & Trust Building

Good evening. Thank you for reaching out to Affillia Security. I'm an AI assistant here to understand your needs so I can connect you with the right member of our team. Everything you share here is treated with complete confidentiality. If you would prefer to speak with someone directly, I can provide our phone number at any point.

2 Contact Collection

Thank you, [Name]. How would you prefer we follow up with you - email or phone?

3 Needs Discovery

Could you tell me a little about what prompted you to reach out today? No detail is too small or too vague - I'm here to listen.

4 Service Identification

It sounds like you may be looking for [residential security / close personal protection / risk advisory]. Have I understood that correctly?

5 Contextual Follow-Up

The assistant asks two or three relevant questions based on the client response, covering property context, urgency, preferred follow-up, and whether the enquiry is exploratory or time-sensitive.

6 Close & Handoff

Thank you for sharing that with me, [Name]. One of our senior consultants will review this personally and reach out via [preferred method] within 24 hours to arrange a confidential conversation.

RISK CONTROLS

Critical AI Guardrails

Rule	Why It Matters
Never give security advice	The AI collects needs; it does not assess risk or advise on tactics.
Never quote pricing	Pricing is bespoke and should be handled by the consultant.
Never pretend to be human	Transparency builds trust with high-net-worth clients.
Always offer the phone number	Sensitive or hesitant clients need a direct human alternative.
Flag urgency	Immediate danger or active threats should be routed to the 24/7 monitored line.

Urgent Threat Response

If the user mentions immediate danger or a specific active threat, the assistant should stop intake and say: I want to make sure you get the fastest possible response. Please call us directly at +44 XXX XXX XXXX; our line is monitored 24/7.

TRUST SIGNAL

Phone Number Strategy

The phone number is not only an alternative channel. Its prominence tells prospective clients that Affillia Security is a real, available team and that sensitive

enquiries can move directly to a human conversation.

Placement	Execution
Navbar	Phone icon and number always visible
Hero section	Dual CTAs: Start Confidential Chat and Call Directly
Chat widget	Opening message includes phone as an alternative
Chat fallback	AI offers phone when the user seems hesitant or sensitive
Contact page	Prominent phone section with operating hours
Footer	Phone number repeated as a trust anchor

BACKEND WORKFLOW

Summarization & CRM Storage

Client

Chat Widget

/api/chat

LLM API

Supabase + Admin Dashboard

Live Chat Loop

User messages are sent with conversation history to the API route. The AI response streams back into the branded chat interface.

Completion Loop

When the conversation ends, the transcript is summarized, structured fields are extracted, the CRM record is created, and the admin team receives a new inquiry notification.

CRM RECORD

What Gets Saved

Field	Source	Example
client_name	Extracted by AI	James Whitfield
client_email	Extracted by AI	j@example.com
client_phone	Extracted by AI, if provided	+44 7XXX XXX XXX
preferred_contact	Extracted by AI	phone
service_type	Extracted by AI	Residential Security
summary	AI-generated summary	Client is concerned about recent break-ins near a primary residence in Mayfair and is seeking on-site personnel plus a system review.
key_concerns	Extracted by AI	recent local break-ins; family safety; property perimeter
timeline	Extracted by AI	within 2 weeks
urgency_level	AI-assessed	medium
sentiment	AI-assessed	concerned but measured
full_transcript	Raw conversation	Complete chat log
status	System	new_inquiry

IMPLEMENTATION

Recommended Stack

Component	Technology	Why
Chat UI	Custom React component	Must match the premium website aesthetic.
AI Backend	Vercel AI SDK + OpenAI GPT-4o-mini	Built for Next.js, supports streaming, low cost.
Database	Supabase PostgreSQL	Encrypted at rest, row-level security, auth built in.
Summarization	Second LLM call after conversation	Produces structured data and consultant-ready summary.
Notifications	Resend email + optional Slack webhook	Creates immediate alerts for new enquiries.
Phone tracking	Manual CRM entry	Calls are logged into the same intake pipeline.

DELIVERY PLAN

Implementation Priority

Phase	What	Effort
MVP	Branded chat widget, Vercel AI SDK, Supabase storage, summarization, phone number across site	1-2 weeks
V2	Admin dashboard with inquiry pipeline and consultation logging	2-3 weeks
V3	Client portal, proposal generation, document uploads	3-4 weeks

Key Design Principle

The site should feel like walking into a premium security firm's reception: the client is greeted calmly, offered a discreet choice of channel, and guided toward the right consultant. The chatbot is the digital receptionist; the phone number is the direct line to the partner's office.
